Where in the World is TWEB?

Meet our team at any of the upcoming conferences or road shows!

Southwest Embryologist Summit (SWES)

Jan 6-7, 2017
 Scottsdale, AZ

Florida Roadshow

January 16 -20, 2017
 Ft. Lauderdale, Miami & Tampa

Canada Roadshow

January 23-27, 2017
 Toronto & Montreal

Seattle Roadshow

February 13-17, 2017
 Seattle

The Donor Egg Meeting

April 28-30, 2017
 Isle of Palms, South Carolina

Delivering Value!

Thaw Assistance:

Our Travelling embryologist will assist with the first thaw protocol at your location and our cost

Experienced Management Team

Greetings!

The World Egg Bank (TWEB) continues to thrive as pioneers in egg banking and we enjoy sharing with our valued partners and clients our successes, outreach activities and latest announcements.

As 2016 comes to a close, we are pleased to report another successful year for our clinics, donors and intended parents alike. The expansion into our new facility has been a huge accomplishment most notably in that we now manage all of our egg retrievals in our own custom built clinic, providing exceptional quality control with our donor ova. This retrieval center gives a more spa like environment for our egg donors, one that provides the appreciation and admiration these young women deserve. This expansion has helped to provide TWEB clinics and recipients with thousands of frozen banked eggs available for immediate shipment and our donor database now boasts over 450 donors! In addition, we launched a new website providing easier access for recipients to view full donor profiles for free and we have traveled to several areas across the country to personally visit clinics interested in partnering with TWEB. (see below article)

We hope 2016 has been a great year for you, your office and your family. The team at The World Egg Bank is truly grateful for all the support throughout the year and value our relationships, our mutual successes and aligned goals to create families.

Season's greeting's and wishing everyone the best for 2017!

Enjoy our latest news!

Best Regards,

Diana Thomas, Founder & CEO
 The World Egg Bank

Management team with best in industry experience in IVF.

Compliance:

Passed all FDA audits for over 10 years and international governmental audits in the UK and Australia

Non-Exclusive:

We do not require exclusive arrangements with our clinic partners

Easy and Free access to Donors:

Web integration of our donor database to the clinics website. No cost for viewing donors

Responsiveness:

We understand and respect timetables

Large selection of banked eggs:

We have a registry of over 400 active donors and banked eggs

Worldwide Shipping:

We ship to your clinic. Your patient does not have to travel or change doctors for eggs

Register at No Cost to View Donors

Our pregnancy data is superior in the industry. The World Egg Bank has been shipping donor ova to the UK, US and Australia for years and has proven results, over 400 donors and dependable quality control.

Let us know who your doctor is and we will contact them directly.

TWEB Joins
RESOLVE

The World Egg Bank Guarantee - Best Quality & Value in the Industry

The World Egg Bank offers recipients a guarantee that is honest, realistic and demonstrates that we stand behind our one of a kind quality control systems to ensure consistent outcomes. No additional costs, no pre-qualifying tests and no

gimmicks. Our singular focus on egg banking and in-house retrieval center combined with our expert staff, ensures that you receive the very best quality and value in the industry.

With the purchase of 6 eggs with our Custom Choice Embryo option, you are guaranteed a minimum of one embryo. With the purchase of 6 vitrified eggs and the doctor's laboratory has been approved/trained by TWEB (at our cost), we offer an egg thaw survival rate of 60% or greater. If the thaw survival rate is less than 60% and no clinical pregnancy results from the transfer of embryos, you will receive replacement eggs at the reduced cost of \$1000 per egg. With our current worldwide thaw success rate at 92%, it is an extremely rare occurrence to have a survival rate of less than 60%.

Some Egg Banks may offer guarantees that sound amazing, but in reality, pregnancies and live births are statistically constant worldwide when quality ova are utilized. Be aware that many of these guarantees come with strict qualifying criteria and high up front commitments and costs. It can be emotionally enticing to believe that these alternative guarantees will result in a take home baby. But, the reality is they are often not necessary, the additional cost is only an "Up Sale" and often individuals are not able to qualify against the strict medical criteria.

At The World Egg Bank - we stand by our eggs without additional costs. We are the longest operating Egg Bank in the U.S. with a large body of pregnancy data from clinics around the world that will support our reputation as a premier center for egg vitrification and superior pregnancy rates.

The World Egg Bank Roadshows!

The World Egg Bank values our relationships with our clinics and makes special effort to have a one on one relationship with clinic teams, doctors and IVF Coordinators. We find this type of hands on approach is a win-win, allowing us to

provide better care and guidance to your patients as well as coordinate shipment without hassle or complications.

For these reasons, members of TWEB have traveled to several areas across the country visiting with both existing and new clinics. These "road trips" have included Texas and New York and we have several planned for the winter and spring including Florida, Toronto, Montreal and Seattle.

TWEB does not require contracts or exclusivity with clinics. When a clinic refers TWEB to an intended parent, they are simply providing more options for their families. In fact, TWEB's current donor roster has over 450 donors and thousands of frozen eggs available for immediate shipment! And, if a recipient identifies a donor in our database, we will work with their clinic directly to ensure the necessary training and verification occurs....at our cost!

TWEB has been screening donors for over 20 years and shipping worldwide for 10 years. Our in house retrieval center combined with our expert medical staff, ensures exceptional quality control and value.

If you are interested in searching our [donor database, click here](#) - registration is free! Or, to learn more about how [TWEB supports your clinic, click here.](#)

We are always looking to plan our next trip! If you would like a personal visit with members of our team, please email layla@theworldeggbank.com.

The World Egg Bank is excited and proud to be part of the amazing organization, RESOLVE. This National Infertility Association is a non-profit, charitable organization, who works to improve the lives of women and men living with infertility.

RESOLVE was established in 1974 and is dedicated to ensuring that all people challenged in their family building journey reach resolution through being empowered by knowledge, supported by community, united by advocacy, and inspired to act. RESOLVE serves all people challenged in their family building journey.

- RESOLVE exists to provide:
- ◊ Access to Care
 - ◊ Advocacy for Coverage
 - ◊ Access to Support & Community
 - ◊ Access to Education
 - ◊ Awareness of All Family Building Options

Meet The Team - Dr. Kimball Pomeroy Scientific Director

"If you can't change the direction of the wind, change the set of your sails." - Unknown

Kimball O. Pomeroy is a clinical embryologist who has directed several clinical laboratories throughout the United States. He was trained in Bristol, England as a human embryologist and prior to that was educated at Colorado State University, where he received a Ph.D. in Animal Physiology, and then worked at the Salk Institute for Biological Studies where he did post-doctoral work in molecular biology. At the Salk Institute, Dr. Pomeroy was a molecular biologist and worked with Dr. Glen Evans on the Human Genome Project (chromosome 11) and did work in transgenics.

Dr. Pomeroy has worked as a consultant for several projects in Mexico, Nepal, China, Bolivia and the Bahamas. He has served as a member of the SART Executive Board, Chair of the Reproductive Laboratory Technician's Group, Chair of the College of Reproductive Biology and a founding member of the Regulatory Task Force and the Southwest Embryologist Summit.

Dr. Pomeroy has lectured at many scientific meetings and has been involved in the organization and presentations at several symposia for the education of embryologists. He has coauthored numerous papers, mostly dealing with the detection of embryo toxins and cryopreservation. Recently he has coauthored several papers on the risks of cross-contamination of microbes during storage of tissue in liquid nitrogen, the usefulness of embryo morphology in predicting pregnancy and the source of microbial contamination during embryo culture.

What is it like to be a parent of a donor egg child? Taking the fear out of the experience.

- Tonya Heilbrun
Recipient Representative

I was recently asked to write an article about what it means to be a parent via donor eggs and to specifically address the fear that can and does often occur during the experience. I found this request relatable as I will admit, I did experience fear. But, what I have learned is that my "fear" was only of the unknown and with all "unknowns" in my life, my desires always overcame.

At first, it is the inability to know what people will do, think and say. Then, it is more about what the child will think, feel and say. Finally, it is how you the parent will feel when impacted by all of these unknowns. While these are certainly valid "fears" or thoughts, what I have learned is that it was my first real experiences of being a mother. And honestly, these are only the beginning. Once you feel that baby kick - the fears quadruple as does the excitement. But most importantly - the "fear" of what will my child think is long past.

What this all boils down to in the end is our own insecurities. Let us think about the logic behind it. At first, we as women are devastated that we have been told we have bad/old eggs. As a young girl, it is just a given that most of us want to grow up to be a mother one day. This in itself is a lot to process. So we learn that we can in fact carry a child and all that we need to do is accept the fact that we will need to use a donor egg.
