

Greetings!

I hope this letter finds you well as we head into this fall season. The World Egg Bank is regularly making visits to clinics worldwide and present at major U.S and global conferences. We are available for webcasts, presentations and old fashion phone calls, anytime. Our goal is to learn about and address your questions and concerns to accommodate your experience when meeting your patients' needs for donor ova. We are the only egg bank to fully manage quality controls from donor screening, retrievals, vitrification to shipping, from a single location with the same, experienced staff. We have the flexibility to modify our banking practices for clinics and patients, as we do not have investors or shareholders placing financial issues before performance issues. We would gladly arrange for a visit with you - just send us an email or give us a call.

We hope you enjoy our October Newsletter and look forward to helping create families worldwide!

Best Regards,
Diana Thomas, Founder & CEO
The World Egg Bank

Adelaide, South Australia
Booth 26

ASRM Scientific Congress & Expo

October 28 - November 1, 2017
San Antonio, TX
Booth 926/928

Featured Clinic

M. Mercedes Gondra, MD,
FACOG

We are proud to highlight The Gondra Center for Reproductive Care & Advanced Gynecology in this months

newsletter. Located in Phoenix, Arizona, this team of all female providers puts an emphasis on creating an environment for patients to feel comfortable, educated, and well cared for. Their belief is that helping the patient through the emotional and psychological toll of infertility is just as important as the medical aspect. Dr. Gondra takes the time to sit with her patients to discuss how they are feeling, what their options are, and to ensure they are happy using her practice. Seeing a positive experience, regardless of outcome, is the most rewarding element to her. The World Egg Bank has a close relationship with Dr Gondra and her practice due to her close proximity to our facility. With a high pregnancy rate, Dr. Gondra's patients continually choose to obtain donor eggs from TWEB.

"Tonya [Client Representative for TWEB] is fantastic and easy to talk to. She is warm and welcoming and helps patients go through the whole process. I feel very positive sending the patients to Tonya to talk about it and walk through the process. I am always happy to provide this option to my patients." -Dr. Gondra

Clinic Webinar

TWEB will be hosting a webinar, on October 19, for all clinics to learn the benefits of working with us. [Click here](#) to register.

Under the Microscope: An Examination of Embryo Transfer Technique

By: Patricia McShane, M.D.

Assisted Reproductive Technology (ART) has allowed millions of couples to bear children over the last 40 years, but it remains less than 100% successful. Attention has focused on improving ovarian stimulation, insemination methods, culture techniques, and screening for genetic status of resulting embryos. These measures have increased pregnancy outcomes year by year, allowing single embryo transfers to become the standard approach in many instances.

Using Frozen Eggs To Successfully Achieve Healthy Pregnancies

By: Luis Murrain Jr., MD, DO, FACMG, FACO
The World Egg Bank Medical Director

It has been nearly three decades since the first live birth was achieved using frozen eggs. Since that time, many advances have been made in the field of reproductive medicine, most notably the introduction of modern vitrification (fast freezing) techniques. Numerous studies have been published confirming the outcome of cycles using frozen eggs to be just as favorable as using fresh eggs.
